Michiaki Uchiyama

2-28-3, Wakamiya, Nakano-ku, Tokyo

[What is claimed is:]

A multiblade air blower, wherein blades arranged at a periphery of a blade-wheel contained in a scroll chamber are twisted, and a discharge angle of a blade is gradually changed without a step.

[Brief Description of the Drawings]

The attached drawings illustrate a practical example. The first figure is a sectional front view of a multiblade air blower having blades according to this utility model, and the second one is its sectional side view. The third figure is a perspective view of the blade-wheel. The fourth, fifth, and sixth figures are enlarged sectional views of part A-A, part B-B, and part C-C, of a part of the blade-wheel in the first figure, respectively.
